

Issue #43: Real-World QML Algorithms

Mentor: Alejandro Pozas Kerstjens

Mentee: Elena Peña Tapia

Motivation

- *In ML, theorems don't always translate well to the real world*
- **Real-world data is different**
- Classical ML → **Heuristics**

Initial Idea

To **Benchmark** recently proposed **QML algorithms** using **real-world examples**

Breakdown

1. **Implementation** using *qiskit-machine-learning*
2. Selection of 1 or more **real-world tasks**
3. Selection of relevant **metrics/criteria & comparison**

Initial Idea

TANGENT

Focus on **Single Qubit Universal Quantum Classifier** by Pérez-Salinas et al.

Breakdown

1. **Implementation** using *qiskit-machine-learning*
2. Selection of 1 or more **real-world tasks**
3. Selection of relevant **metrics/criteria & comparison**

Insights from Pérez-Salinas et al.

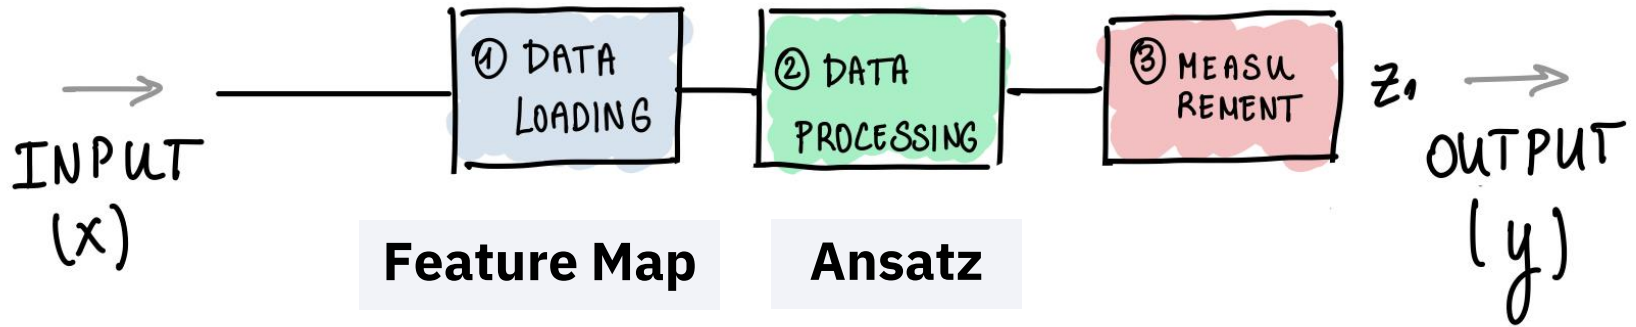

[1] → *Data re-uploading for a **universal** quantum classifier (2020)*

[2] → *One qubit as a **universal** approximant (2021)*

In **theory**, and when tested on synthetic datasets, the proposed single qubit QNN can **learn data distributions** of an **arbitrary dimension**.

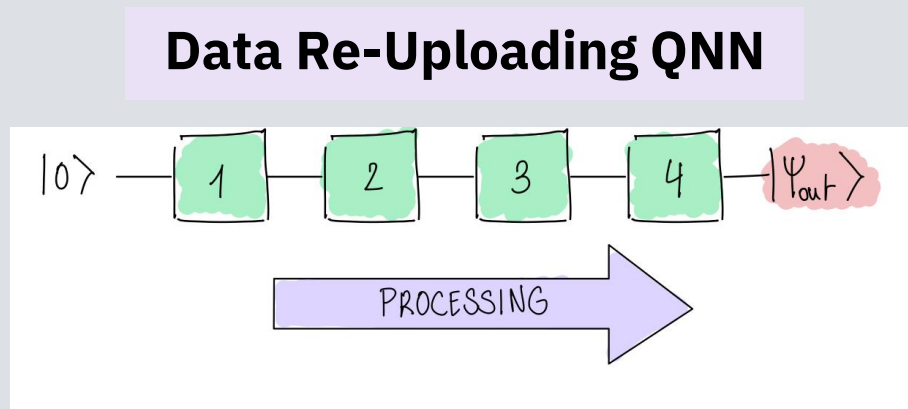

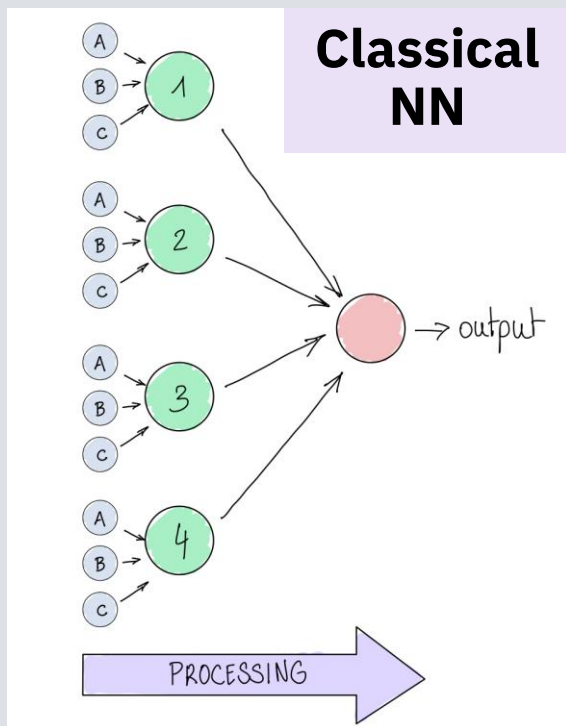

Single-Qubit QNN

Single-Qubit Universal Classifier

Concept of **Data Re-Uploading** → Data loading = data processing

Different Layer formulations

Unitary Layer

Compressed Unitary Layer

UAT Layer

Implementation in Qiskit

- `SQUClassifier()` extends `NeuralNetworkClassifier()`
- Sample use:

```
classifier = SQUClassifier(num_inputs=3,  
                           num_layers=3,  
                           layer_type="UAT",  
                           optimizer=L_BFGS_B(maxiter=50),  
                           callback=callback_graph)  
  
classifier.fit(X_train, y_train)  
classifier.score(X_test, y_test)
```

Testing Layer Types → Circle Dataset

Unitary Layer

(Test Set)

Accuracy: 92.9%

Compressed Unitary Layer

(Test Set)

Accuracy: 90.9%

UAT Layer

(Test Set)

Accuracy: 88%

Testing # Layers → Circle Dataset

1 Layer
(Test Set)

**Accuracy:
74%**

2 Layers
(Test Set)

**Accuracy:
73%**

3 Layers
(Test Set)

**Accuracy:
88%**

4 Layers
(Test Set)

**Accuracy:
90%**

5 Layers
(Test Set)

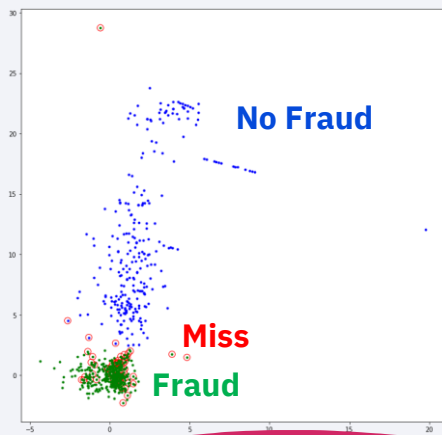

**Accuracy:
90%**

Kaggle Credit Card Fraud Detection Test

BEST QUANTUM NN

1 Qubit, 2 Layers

Accuracy: 90.2%

Vs.

BEST CLASSICAL NN

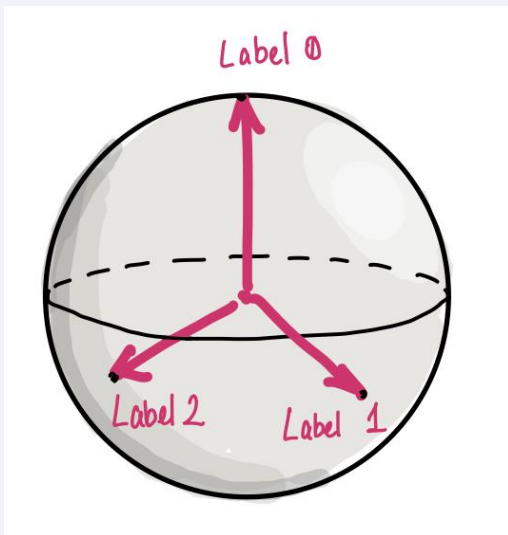

1 Hidden Dense Layer

Accuracy: 89.8%

How can we take our qubit further??

Multi-Class Classification

Multi-Qubit Architectures
